

Crescent Select[™]
Alpha-cellulose conservation matboard

Today more than ever, color helps you express your style. Combining beautifully colored or fabric matting allows you to create a look that is truly custom.

Ideal For:

- Limited edition prints
- Valuable documents
- Photography
- Art of personal or monetary value

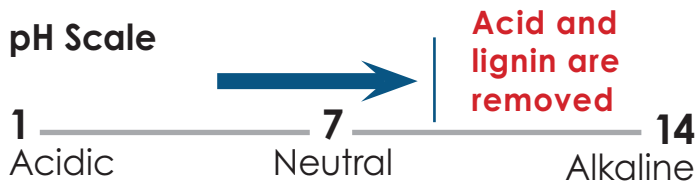

Prevent Acid Burn

How do conservation mats protect artwork?

Not all white core matboards are created equal. If acid and lignin are not removed artwork can be damaged over time.

The dark brown area has been discolored by the acid in a non-conservation matboard.

Conservation quality matboards are purified and buffered with calcium carbonate to keep them pH neutral and safe for art.

Crescent Select Matboard is Safe for Artwork

Crescent Select Matboards meet all conservation quality standards as set by the Fine Art Trade Guild.

Quality Counts

Only the finest materials are used in making Crescent Select conservation matboards.

- Natural color pigments provide superior fade and bleed resistance
- To ensure the safety of the customers artwork, no recycled materials are used
- Acid-free and Lignin-free for a decades renewable product
