

Crescent® notFOAM™

notFOAM offers an eco-friendly mounting and backing board solution for any framing application.

notFOAM is "not foam" because it is:

RECYCLABLE notFOAM standard foam
notFOAM can be recycled or sold to recycling companies and re-used instead of filling dumpsters and paying large dumping fees.

RENEWABLE notFOAM standard foam
Trees for paper use to make notFOAM are farmed cyclically as a crop and the process is highly sustainable. These managed forests provide wildlife habitat, absorb greenhouse gases and produce oxygen. Managed forests also provide long-term employment for domestic workers.

REPULPABLE notFOAM standard foam
Paper mills can efficiently use recycled material like notFOAM without a lot of treatment or energy intensive processes. They simply add water, blend and make more paper from it. Plastic/Foam is expensive, energy intensive, inefficient to re-use and cannot be re-made into new foam due to the breakdown of carbon chains.

COMPOSTABLE notFOAM standard foam
If nothing was done to re-process notFOAM, Mother Nature will take care of it. Pulp fiber used to make notFOAM breaks down naturally and easily. Foam, however will last for centuries if not properly disposed of.

SUSTAINABLE notFOAM standard foam
All fiber used to produce notFOAM is certified under the Sustainable Forestry Initiative. This ensures that all notFOAM materials come from recycled content or certified managed forests by companies certified to the SFI 2015-2019 Fiber Sourcing Standards.

PRODUCT DETAILS

White buffered, acid-free surface with natural kraft corrugation and backing. Core comprised of E and B corrugated to reduce visibility of flute lines and provide better smoothness and rigidity during mounting. Total thickness = 3/16".

ITEM NUMBER	DESCRIPTION	SIZE	SHEETS PER BUNDLE	WT PER 100 SHEETS
NF3240	WHITE/KRAFT	32" X 40"	280	150
NF4060	WHITE/KRAFT	40" X 60"	280	290
NF4896	WHITE/KRAFT	48" X 96"	280	540

notFOAM Kraft features a buffered, acid-free smooth white surface and a natural kraft corrugation and backing.

The SFI Certified Sourcing label and claim do not make claims about certified forest content. They tell buyers and consumers that fiber in a product comes from a company that is certified to the SFI 2015-2019 Fiber Sourcing Standard or comes from recycled content, or from a certified forest. All fiber must be from non-controversial sources. Certified sourcing is a defined term in SFI Definitions (Section 13, SFI 2015-2019 Standards and Rules).
